

Advice for the use of Estrumate (Prostaglandin) for AI/ET programmes

In order to get your cows in the correct state for either AI or ET you will have to give them a dose of 2ml of Estrumate eight days after inserting the CIDR.

Please handle this drug with care as it can be absorbed through the skin and can cause problems in certain people. In order to reduce the risk of any adverse reactions please follow the instructions below:

1. Wear gloves when using the product
2. Do not use if pregnant or asthmatic
3. Do not eat, drink, or smoke when using this product
4. Give the injection by deep intramuscular injection into the anterior half of the neck or into the rump
5. Avoid injecting through wet or dirty areas of skin
